

Privacy Checkup for iOS

We are going to check your Apple/iCloud configurations to understand more about privacy settings on your iOS device. We are not checking the privacy of every app on your device.

What we are checking?	Features	How to check?	Why we are checking this?
<i>Account ownership</i>	<ul style="list-style-type: none">- iCloud registered email address- Backup settings	<ul style="list-style-type: none">- Settings → "Your Name"- Settings → "Your Name" → iCloud → iCloud Backup	The iCloud owner has access to location, app usage, all (backed up) data in the device. It's also used for Find my iPhone.
<i>Location sharing</i>	<ul style="list-style-type: none">- Find my friends- Share my location- Family sharing- Significant locations	<ul style="list-style-type: none">- Find my Friends app- Settings → Privacy → Location Services → Share My Location- Settings → "Your Name" → Family Sharing- Settings → Privacy → Location Services → System Services → Significant Locations (turn it off)	<p>Device location can be shared or accessed in many ways.</p> <p>"Significant locations" keeps track of prior locations you have visited. Abusers with physical access to the device will get location history.</p>
